

The Warren County Health Department is charged with protecting and enhancing the general health and welfare of the County's residents and visitors. This is accomplished by conducting a comprehensive public health program, consisting of Health Promotion, Consumer Health, Environmental Health, and Personal Health Services.

Goals are achieved through prevention, education and judicious regulatory action. All activities are conducted in close, ongoing cooperation with relevant state, municipal, and private agencies.

The Department is staffed by highly qualified and dedicated licensed sanitarians, educators, nurses, therapists, and support personnel. The staff invites inquiries concerning health issues and services, and welcomes the opportunity to serve the citizens of Warren County.
